1. Application Overview

1.1 Pages

The Book Finder Application has mainly three pages

1. Home Page

This page consists of 4 main sections

- a. Navigation bar
- b. Hero Section with call-to-action button
- c. Trending list of books
- d. Footer

2. Explore page

This page shows the curated list of books made for the user to find the interesting books to read.

3. Search page

In this page we show the results of the search query performed by the user

1.2 Reusable components

To scale our application, we need to use reusable components across the application. These components can be used in different pages. And multiple times in a single page.

In our application we can have 4 main reusable components they are as follows

1.2.1 Navbar

Navbar element should be present in every page so it is good idea to have it as a separate component.

Figure 1. Navbar

1.2.2 Footer

Footers on websites should be visible in every page so it can also be a separate component on its own.

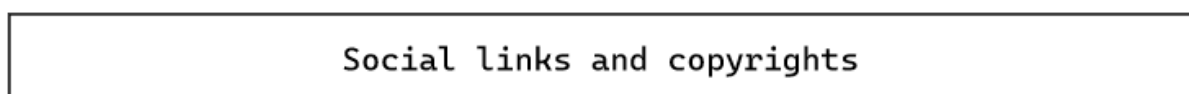

Figure 2. Footer

1.2.3 Book Card Component

Details of books can be shown in an intuitive way using card design. This component can be reused for different books.

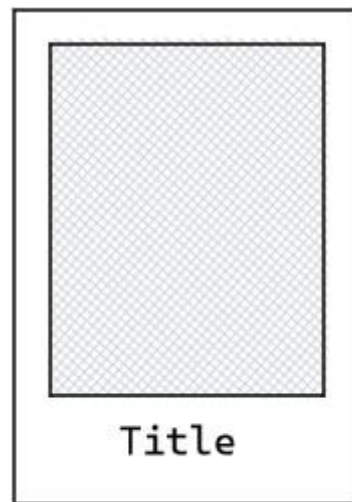

Figure 3. Book Card Component

1.2.4 Search Card Component

When searching API returns array of results, we can show it to the user using card design this component can be reused in the project.

2. Pages

2.1 Home Page

This is the page user lands at first when the user starts using our application. This page consists of 2 main sections

1. Hero Section
2. Trending Section

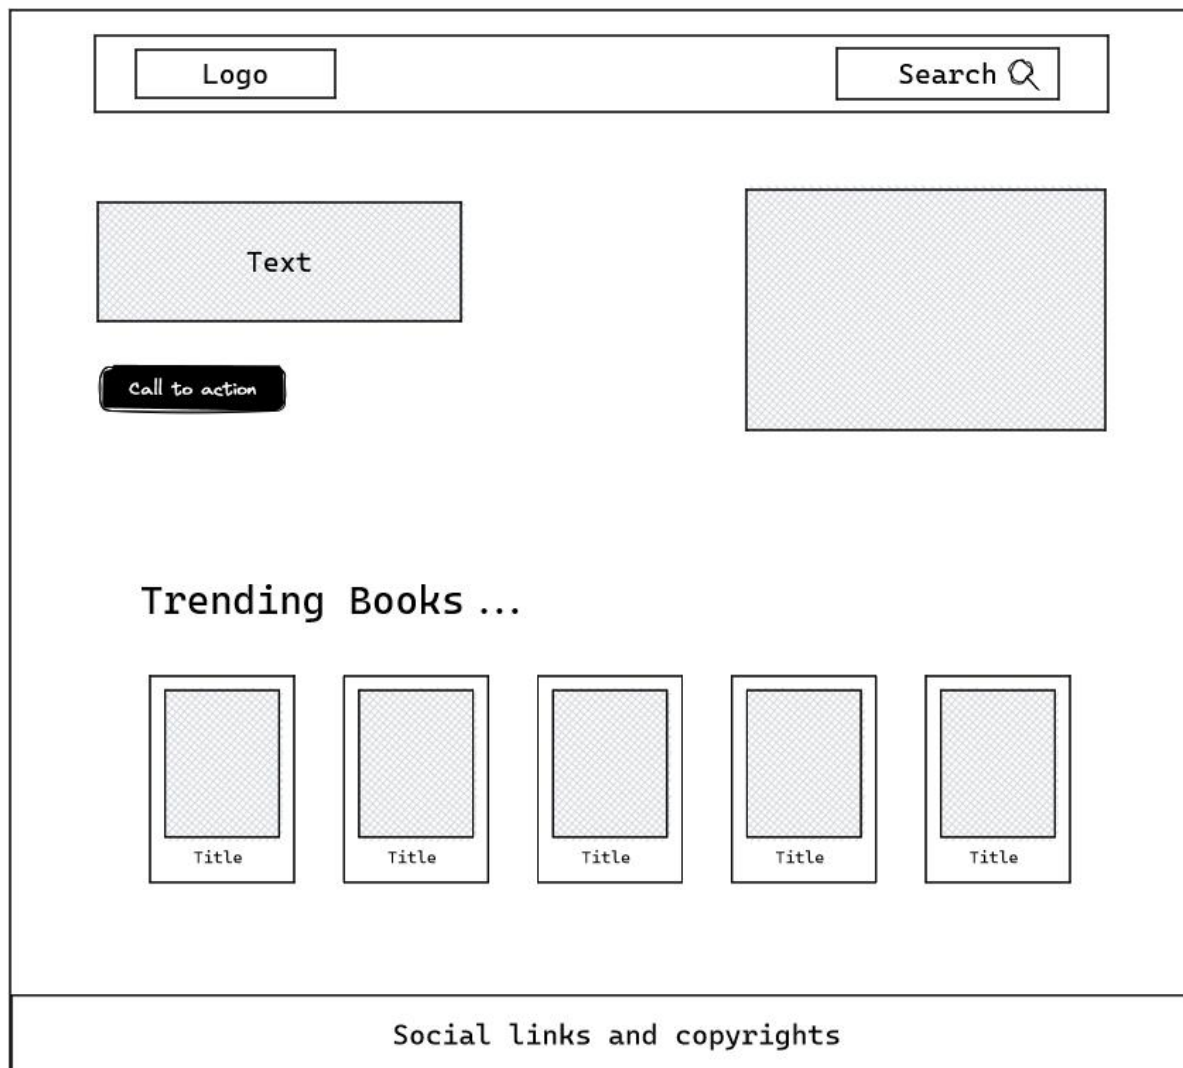

Figure 5. Home Page

2.2 Explore Page

This is the page where we show curated lists of interesting books from different sources on the internet.

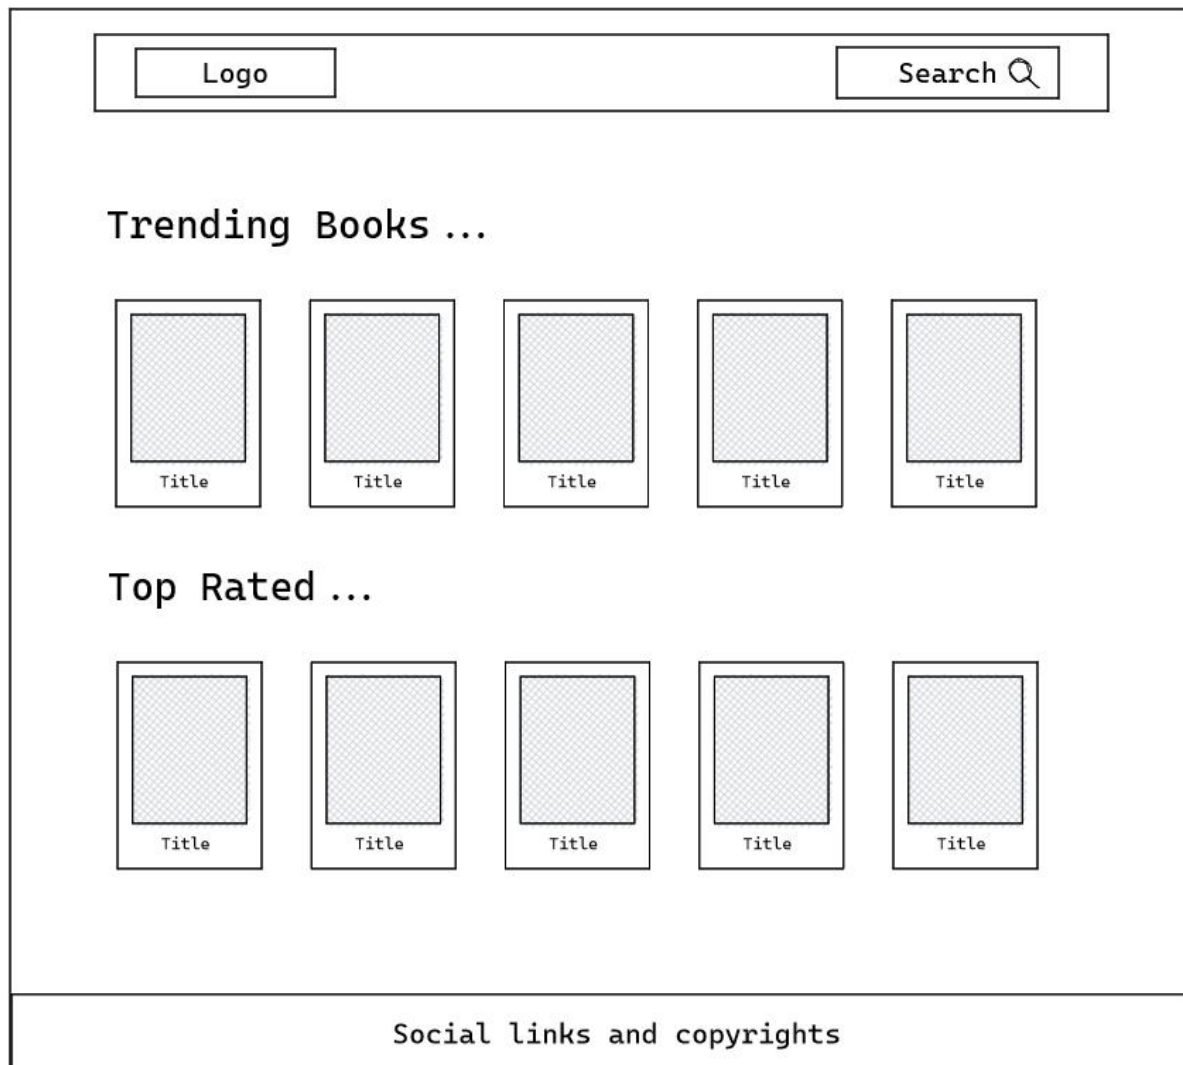

Figure 6. Explore Page

2.3 Search Page

This is the page where we show search results of the search made by the user.
