# Book Finder Application

By Aditya Kadali

Objective

- To build an effective and clutter free user interface to search books using title, author and descriptions.

Features

- Able to search for meta data of books using google books API

- Able to find new books from curated lists provided in explore page by the website maintainers.

- Minimal clutter free user experience

Technology Stack

- Frontend
  - ReactJS
  - Tailwind CSS
  - React Router DOM
  - Slick Carousel

- Backend
  - Google Books API

Tailwind CSS

Google Books API

React Router

Pages

- Home Page
  - Hero Section
  - Trending Section

- Explore Page

- Search Page

Backend

- We used Google Books API service for this project to fetch the meta data of the books.

- It is free use API service provided by the Google

Deployment

- We used Netlify Hosting service to host this application

Future Plans

- Implement Authentication system for user to save books

- Use Database to save reading lists of user
